elmeg D130

Easy-to-use, robust cordless handset for business

DECT handset, brilliant 1.8“ TFT colour display with 8 lines, intuitive, icon-based user interface; speakerphone feature, headset connection via Bluetooth® or 2.5 mm jack, integration of hybird phone book and voicemail

Product description

The speakerphone feature frees up your hands so you can perform other tasks while you talk or use the handset for teleconferencing. Thanks to the headset jack and Bluetooth® connectivity, you can use this handset with a wide range of wired and wireless headsets. And with the brilliant audio quality of the speakerphone feature, now you can move throughout the office as you please.

The large color display in combination with the icon-based user interface allows you to use elmeg hybird system features and gives you a range of convenient extras. In addition to the dialing assistance provided by the system phone book, call signaling, and alerts for new voice messages on the cordless handset, users can also access their hybird voicemail at the touch of a button. The cordless handset itself provides a local contact list for up to 500 entries. Additional highlights include the ability to assign telephone numbers to individual keys for speed dialing, and a feature that lets you enter appointments, customer birthdays, or important family events. You can even set up notifications for new emails if desired. A recent callers list and a redial feature for the last 20 numbers dialed are of course included.

With 180 hours of standby and 13 hours of talk time, you're always connected at home or in the office. Especially when used in combination with the elmeg DECT200 multi-cell system, you will always be reachable and able to communicate freely thanks to the system's integrated automatic handover from one radio cell to the next.
